

Consumer Confidence Report for Calendar Year 2021

Este informe contiene informactión muy importante sobre el aqua usted bebe. Tradúscalo ó hable con alguien que lo entienda bien.

Public Water System ID Number	Public Water System Name					
AZ0408078	Walnut Creek Water Co.					
Contact Name and Title	•	Phone Number	E-mail Address			
Todd Allen, Director of Operations		623-935-1100	todd@vuwco.com			

Drinking Water Sources

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Our water source(s): 4 active wells that pump groundwater from the Sacramento Valley Basin

Drinking Water Contaminants

Microbial Contaminants: Such as viruses and bacteria Organic Chemical Contaminants: Such as synthetic and that may come from sewage treatment plants, septic volatile organic chemicals, which are by-products of industrial systems, agricultural livestock operations, and wildlife processes and petroleum production, and also may come from gas stations, urban storm water runoff, and septic Inorganic Contaminants: Such as salts and metals that systems. can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil Radioactive Contaminants: That can be naturally occurring and gas production, mining, or farming or be the result of oil and gas production and mining activities. Pesticides and Herbicides: Such as agriculture, urban storm water runoff, and residential uses that may come from a variety of sources

Vulnerable Population

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. Some people may be more vulnerable to contaminants in drinking water than the general population.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and microbiological contaminants call the EPA *Safe Drinking Water Hotline* at 1-800-426-4791.

Source Water Assessment

This PWS did not receive a SWAP because the PWS was either inactive at the time or the PWS did not exist. Further source water assessment documentation can be obtained by contacting ADEQ.

Definitions

20111110110						
Treatment Technique (TT) : A required process intended to reduce the level of a contaminant in drinking water	Minimum Reporting Limit (MRL) : The smallest measured concentration of a substance that can be					
Level 1 Assessment: A study of the water system to identify	reliably measured by a given analytical method					
potential problems and determine (if possible) why total coliform bacteria was present	Millirems per year (MREM): A measure of radiation absorbed by the body					
Level 2 Assessment : A very detailed study of the water system to identify potential problems and determine (if	Not Applicable (NA): Sampling was not completed by regulation or was not required					
possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria was present	Not Detected (ND or <): Not detectable at reporting limit					
Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment, or other requirements	Nephelometric Turbidity Units (NTU): A measure of water clarity					
Maximum Contaminant Level (MCL): The highest level of a	Million fibers per liter (MFL)					
contaminant that is allowed in drinking water	Picocuries per liter (pCi/L): Measure of the radioactivity in water					
Maximum Contaminant Level Goal MCLG): The level of a						
contaminant in drinking water below which there is no known	ppm : Parts per million or Milligrams per liter (mg/L)					
or expected risk to health	ppb : Parts per billion or Micrograms per liter (µg/L)					
Maximum Residual Disinfectant Level (MRDL): The level of	ppt : Parts per trillion or					
disinfectant added for water treatment that may not be exceeded at the consumer's tap	Nanograms per liter (ng/L) ppm x 1000 = ppb					
Maximum Residual Disinfectant Level Goal (MRDLG): The	ppq : Parts per quadrillion or ppb x 1000 = ppt					
level of disinfectant added for treatment at which no known or anticipated adverse effect on health of persons would occur	Picograms per liter (pg/L) ppt x 1000 = ppq					

Lead Informational Statement:

Lead, in drinking water, is primarily from materials and components associated with service lines and home plumbing. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Walnut Creek Water Co. is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Microbiological (RTCR)	TT Violation Y or N	Number of Positive Samples	Positive Sample(s) Month & Year	MCL	MCLG	Likely Source of Contamination	
E. Coli	Ν	0	N/A	0	0	Human and animal fecal waste	
Fecal Indicator (coliphage, enterococci and/or E. coli)	Ν	3	Aug 2021	0	0	Naturally present in the environment	
Disinfectants	MCL Violation Y or N	Running Annual Average (RAA)	Range of All Samples (Low-High)	MRDL	MRDLG	Sample Month & Year	Likely Source of Contamination
Chlorine/Chloramine (ppm)	N	0.17	0.03 – 0.31	4	4	2021	Water additive used to control microbes
Lead & Copper	MCL Violation Y or N	90 th Percentile	Number of Samples Exceeds AL	AL	ALG	Sample Month & Year	Likely Source of Contamination
Copper (ppm)	Ν	0.12	0	1.3	1.3	Sep 2019	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	Ν	0.078	0	15	0	Sep 2019	Corrosion of household plumbing systems; erosion of natural deposits
Inorganic Chemicals (IOC)	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination

Water Quality Data – Regulated Contaminants

		Detected					
Arsenic¹ (ppb)	Ν	9.2	9.2	10	0	Dec 2019	Erosion of natural deposits, runoff from orchards, runoff from glass and electronics production wastes
Barium (ppm)	Ν	0.054	0.054	2	2	Dec 2019	Discharge of drilling wastes; discharge from metal refineries; Erosion of natural deposits
Chromium (ppb)	Ν	4.4	4.4	100	100	Dec 2019	Discharge from steel and pulp mills; Erosion of natural deposits
Fluoride (ppm)	Ν	2.6	2.6	4	4	Dec 2019	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Nitrate² (ppm)	Ν	3.5	3.5	10	10	May 2021	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Sodium (ppm)	Ν	56	56	N/A	N/A	Dec 2019	Erosion of natural deposits

¹ Arsenic is a mineral known to cause cancer in humans at high concentration and is linked to other health effects, such as skin damage and circulatory problems. If arsenic is less than or equal to the MCL, your drinking water meets EPA's standards. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water, and continues to research the health effects of low levels of arsenic.

² Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause "blue baby syndrome." Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, and detected nitrate levels are above 5 ppm, you should ask advice from your health care provider.

Radioactive Contaminants	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level Detected	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination
Combined Radium 226/228 (pCi/L)	N	0.8	0.8 – 0.8	5	0	Dec 2019	Erosion of natural deposits
Gross alpha excluding radon and uranium (pCi/L)	Ν	9.2	9.2 – 9.2	15	0	Dec 2019	Erosion of natural deposits

Assessments for the Revised Total Coliform Rule (RTCR)

Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. If coliform is found, then the system is responsible to look for potential problems in water treatment or distribution. When this occurs, the water system is required to conduct assessment(s) to identify problems and to correct any problems that were found during these assessments.

 During the past year, we were required to conduct one Level 1 assessment. One Level 1 assessment was completed.

Please share this information with other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
